User Manual

Lead a Whole New Lifestyle

Welcome to a Whole New Lifestyle!

Congratulations on purchasing Apollo Electronic Cigarette products! You have made the right choice for yourself and the environment. You are starting a whole new lifestyle!

Before starting to use your Apollo Electronic Cigarette, please read this manual carefully to help ensure that you get the most out of your Apollo Electronic Cigarette products.

This manual should be kept in a safe place for future reference.

Prohibited Use

The following people should not use this product:

1. Minors under the legal smoking age
2. People allergic or sensitive to nicotine or related inhalants
3. Pregnant or breastfeeding women

Box Contents

The Apollo Superior EGo Kit includes the following components: 2 Manual batteries, 2 CE4 Clearomizers, 1 e-liquid bottle, 1 USB charger, and 1 wall adaptor.

Wall Adaptor (1)

USB Charger (1)

Battery (2)

CE4 Clearomizer (2)

E-liquid bottle (1)

Structure of Apollo Electronic Cigarette

The e-cigarette body is an integrated structure consisting of a manual lithium-ion battery and a CE4 clearomizer.

Apollo Clearomizer

The Apollo CE4 Clearomizer holds the e-liquid (with or without nicotine) and converts it to vapor. E-liquid is available in different nicotine levels and a variety of flavors. The CE4 is one of the newest models of cartomizer and is known for its huge amounts of vapor!

CE4 Clearomizer

Keep your clearomizers in a cool and dry place, out of the reach of children and pets. Please dispose of them appropriately after use. Apollo CE4 clearomizers are intended for use with the Apollo Superior EGo Kit, but can be used with other 510 batteries.

Apollo Battery and Charger

The Apollo Electronic Cigarette uses a lithium-ion battery along with its supporting charger. Both of these devices are specific to the products and cannot be substituted with other batteries or chargers. Using any other batteries or chargers designed for other kits can cause a fire or explosion hazard. However, the cartomizer is compatible with other 510 batteries, and the battery is compatible with other 510 atomizers and cartomizers.

The battery has a button that you hold to produce vapor. It has a smart chip that will cut off after about 8 seconds, and the LED will flash a few times to indicate that the button was held for too long. Holding the button for too long can damage your cartomizer.

Turn On/Off Battery
To turn off the battery, click the button quickly 5 times (within 3 seconds.) You can also turn the battery back on this way. This is useful for when you keep your e-cigarette in your pocket, to prevent it from accidentally being activated.

Warnings

For safe and effective use of the Apollo Electronic Cigarette, please read through the following information carefully and follow the standard operating procedures carefully.

1. Accidental button-holding can damage your cartomizer. Turn off the battery when you put it in your pocket.
2. Nicotine can be absorbed through the skin. Be careful when handling e-liquid.
3. Please lock up the product and keep it out of reach of children or pets.
4. Do not charge the battery near a high-temperature heat source.
5. If you do not feel well after use, please discontinue use and seek medical advice.
6. Please do not disassemble the battery. Disassembling the battery will cause damage to the smart chip, and put you at risk for electrical shock.
7. Keep all parts away from water.
8. Never directly draw on a cartomizer without connecting it to the battery. Ingesting too much of the e-liquid can lead to nausea, vomiting, and dizziness.

How to Charge

Charge the Apollo E-cigarette batteries using the USB charger or the wall charger. When the LED on the charger turns from red (charging) to green (fully charged), the battery is ready for use. The Apollo batteries are partially charged on arrival, so you can use your Apollo Electronic Cigarettes immediately. However, we recommend that you fully charge the batteries before use. Insert a battery into the charger, turn clockwise to screw it in, and connect it to a power source (USB port or power outlet, depending on which charger you are using). The charge may take 2-3 hours to finish.

Battery is charging

Battery is fully charged

Filling Instructions

1. Take a new clearomizer out of its wrapper. Unscrew and remove the mouthpiece at the end of the cartomizer (labeled below.)
2. Fill the clearomizer about 3/4 of the way with e-liquid, with the unscrewed end facing up. Drip the liquid into the clearomizer, avoiding the hole directly in the middle of the cartomizer.
3. Replace the mouthpiece. Make sure it is fully screwed in.

Assembly

1. Take a battery out of its packaging.
2. Screw the clearomizer onto the battery by turning it clockwise until it stops.
3. You're ready to go!

Fully assembled Superior EGo

Operating the Apollo Electronic Cigarette

Please avoid smoking the Apollo Electronic Cigarette in an upward position.

The battery will activate the cartomizer while the button is held. The LED indicator on the button will light up. The cartomizer will then heat up a tiny drop of the nicotine solution and produce a cloud of vapor.

Each Apollo CE4 cartomizer will last about 250 puffs per fill, depending on the length of your drag. The battery will last longer than one cartomizer. Eventually you will notice a decrease in vapor and taste, which indicates that the cartomizer needs to be replaced or refilled.

When the power of the lithium battery is fully depleted, the LED indicator will flash a few times. When this happens, charge the battery and switch to the other one.

Advantages of the Apollo E-Cigarette

1. The Apollo Electronic Cigarette uses the latest microelectronics and air dynamic technologies. Every Apollo e-cigarette is tested before shipment.
2. The Apollo Electronic Cigarette does not produce the 4,000+ toxic chemicals that traditional tobacco cigarettes do when smoked.
3. It is non-flammable, so there is no fire or burning risk.
4. It does not produce harmful second-hand smoke.
5. It helps you save money. Each Apollo cartomizer is equivalent to approximately a pack of tobacco cigarettes. By switching to Apollo, you'll be saving quite some money each year.

Warranty

Subject to the conditions and limitations set forth on www.apolloecigs.com, the Apollo Electronic Cigarette is fully covered by a 12-month warranty against defects in workmanship and materials. The only exception is the cartomizer, which has a 2-week warranty.

Should any part of your Apollo product fail to operate satisfactorily, you can return it to us for a replacement. Please pack the unit securely and obtain appropriate shipping insurance. Please include a full description of the defect or details of the claim, along with your return address, telephone number, and legible proof of purchase. We are not responsible for damage or loss caused by postal handling. Whenever possible, please send the only component in question, as opposed to the entire kit.

Troubleshooting Tips

Problem	Solution
No vapor when smoking	1. The battery may be out of power. Make sure it is recharged. 2. The battery may be off. Click the button 5 times in 3 seconds.
The cartomizer gets hot after you use it for a while	This is normal because the cartomizer is heated to produce vapor. You can just stop using it for a few seconds or reduce the frequency of inhales to let the device cool down.
The LED light is always on	Unscrew the battery and press the button a few times to make sure it's not stuck.
There is vapor but a burnt taste	Make sure the cartomizer has liquid in it. Make sure liquid touches the white threads in the cartomizer.

Troubleshooting Tips (continued)

Problem	Solution
E-cigarette is leaking e-liquid	1. Make sure the mouthpiece of the cartomizer is tightly screwed in. 2. Make sure the cartomizer is screwed on tightly to the battery. 3. Try using a new cartomizer.
Cartomizer isn't making as much vapor as it used to	1. Try using a fully-charged battery. 2. The cartomizer may have burned out. Cartomizers have a 2-week warranty (the rest of your parts have a 1-year warranty.) Vapor will increase a lot with a new cartomizer. The heating coils eventually burn out, which is why cartomizers are disposable.
